TEST LOAD-TIME

Do not show the results on the boards

This test measures how long it takes to connect to your site and for one page to fully load. A very important value to pay attention is the "time to first byte", which gives us how long it took for the content to be sent back to browser to start processing the page. If you are using a CDN (Content Delivery Network), your connection time may be low, but if the time to first byte and total time is also not low, it will not give you much in terms of performance.

	Location	Website	Connection	First Byte	Total
Wa .	USA, Dallas	pandjarov.com (181.224.147.223)	0.047 secs	0.267 secs	0.289 secs
+	Canada, Toronto	pandjarov.com (181.224.147.223)	0.093 secs	0.308 secs	0.317 secs
W	USA, Atlanta	pandjarov.com (181.224.147.223)	0.217 secs	0.244 secs	0.271 secs
	USA, New York	pandjarov.com (181.224.147.223)	0.099 secs	0.124 secs	0.148 secs
٠	Canada, Montreal	pandjarov.com (181.224.147.223)	0.053 secs	0.078 secs	0.104 secs
W	USA, Los Angeles	pandjarov.com (181.224.147.223)	0.119 secs	0.177 secs	0.234 secs
	Germany, Frankfurt	pandjarov.com (181.224.147.223)	0.116 secs	0.231 secs	0.347 secs

Blitz provides performance results of containing rich diagnostic information, so you can understand the end user experience and track performance of individual HTML components such as CSS, JavaScript and images.

The results include the performance data - containing waterfall charts of resource loading, status and response times for all components.

You can also check a detailed analysis with descriptions of problems found and suggestions for remediation.

Moving fast with high performance Hack and PHP

GET STARTED WITH HHVM

What is HHVM?

HHVM is an **open-source** virtual machine designed for executing programs written in **Hack** and **PHP**. HHVM uses a just-in-time (JIT) compilation approach to achieve superior performance while maintaining the development flexibility that PHP provides.

HHVM supports **Hack**, **PHP 5** and the major features of **PHP 7**. We are aware of **minor incompatibilities**, so please **open issues** when you find them. HHVM

Video: What's Evolving in Elasticsearch

Watch Now

What's New in Elasticsearch?

Have you ever needed to change mappings or gain performance benefits of one of the latest Elasticsearch data structures? Elasticsearch 2.3 is for you. In addition to our brand-new reindex API that can reindex data without it ever leaving the cluster, 2.3 includes all of the latest advances in speed, security, scalability, and hardware efficiency. Plus it has a brand-new built-in task management API and is compatible with the 2.3 versions of Shield (security), Marvel (monitoring), Watcher (alerts), and more. Learn more.

SUBCOMMANDS

Name	Description
cli	Open a mysql console using the WordPress credentials.
create	Create the database, as specified in wp-config.php
drop	Delete the database.
export	Exports the database to a file or to STDOUT.
import	Import database from a file or from STDIN.
optimize	Optimize the database.
query	Execute a query against the database.
repair	Repair the database.
reset	Remove all tables from the database.
tables	List the database tables.

GLOBAL PARAMETERS

--path=<path>

Path to the WordPress files.

--url=<url>

Pretend request came from given URL. In multisite, this argument is how th

--user=<id|login|email>

Set the WordPress user.

--skip-plugins[=<plugin>]

Skip loading all or some plugins. Note: mu-plugins are still loaded.

--skip-themes[=<theme>]

Skip loading all or some themes.

--skip-packages

Skip loading all installed packages.

--require=<path>

Load PHP file before running the command (may be used more than once)

--[no-]color

Whether to colorize the output.

--debug

Show all PHP errors; add verbosity to WP-CLI bootstrap.

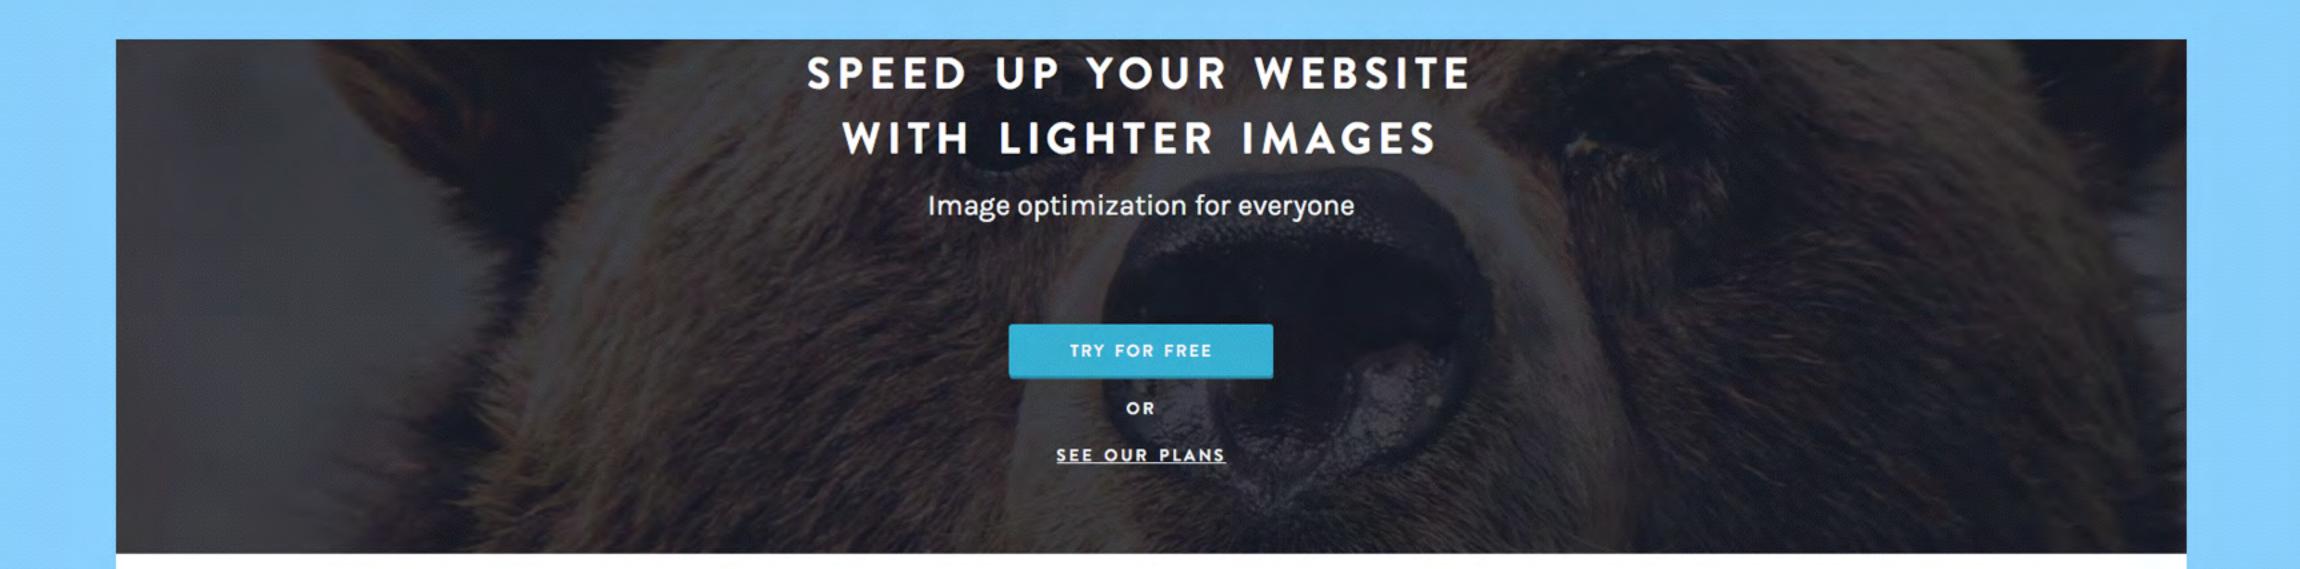

Prompt the user to enter values for all command arguments.

--quiet

Suppress informational messages.

ECONTENT OPTIMIZATION

IMAGIFY WILL HELP YOU REACH PERFECTION

It's a fact that the average web page keeps getting heavier. It can be blamed on images, as they are more and more prominent.

Why should we have to choose between beauty and speed? It is time to fix this.

SPEED UP YOUR WEBSITES

With lighter images you will gain in speed, user experience and even in SEO.

SAVE TIME

Stop fine-tuning your images, they are now automatically optimized.

DON'T SACRIFICE QUALITY

Reduce the weight of your images without sacrificing their quality. They will remain beautiful.
